---

Info and to share with your neighbors.

This info will also be on GLID Facebook and web site.

***Your GLID, with our partner Lake Restoration services with DNR/EPA approval, will be treating 50.5 acres of the invasive Curly Pond Leaf weeds the week of April 22nd weather permitting 🎵***  
(MPARS Permit 2018-1015 - Green, Isanti, CLP, pesticide Issued - Isanti County)

***This treatment action needs to be done to try to manage the most congested lake areas. AIS best management practices tries to reduce the stubborn CLP turion bank . Treatment of congested weed areas also may improve boating enjoyment. 🙏***

***Refer to our delineation map provided by partner AIS Services.***

Note GLID Board, with some extra discussion with our DNR and Lake Restoration, GLID is able to save thousands of dollars with this permitted application by using less expensive but most effective herbicide ✓

Also, with extra discussions, GLID will be able to give back to our Green Lake Owners treating their dock areas by paying for their DNR permit fees 🎵

Funds come from the savings and the thousands that came from AIS Grants.

Treating dock areas helps reduce the lake's nutrient budget.
