

## 2025 Public Notice Of Treatment of Aquatic Invasive Species Curly-leaf Pondweed :

March 7, 2025

Notice To Green Property Owners and Lake Users:

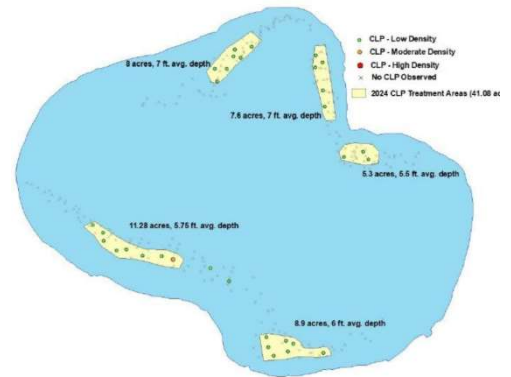

As part of its ongoing effort to preserve and improve the water quality of Isanti Green Lake, Green Lake Improvement District (GLID) will be contracting with a vendor to treat aquatic invasive plants in 2025. We wish to keep all of you well informed, and this is notice that we will be treating various areas of Green Lake for curly leaf pondweed in April or May of 2025. ALL DNR-Approved treated areas will be 150 feet or more away from the shore.

The treatment is for Curly-leaf pondweed (CLP) which is an invasive plant that grows in the spring and early summer. The objective of the curly leaf pondweed treatment program is to treat the heaviest growth of CLP to improve the water quality and recreational use of the lake. Planned treatment sites will be approved by the DNR if they are 150 offshore feet or more.

There are NO Green Lake treatment sites are within 150 feet of the shoreline.

For many years, GLID, on behalf of Lake Owners, has been using DNR best practices to control the invasive highly congestive Curly-leaf Pondweed by reducing the plants turion bank buildup. GLID's contracted weed control process seems to be working. For complete Green Lake weed treatment information, go to GLID Website at <https://www.greenlakemnid.com/>

Also for reference, check out GLID Newsletter titled: "Planning Ahead for Green Lake Weed Management" in our ['2023 spring green lake email newsletter.pdf](#)

The DNR requires us to notify property owners of the treatment with this public notice. The treatment methods will follow Department of Natural Resources' guidelines and permit.

Regards,

Gordon Haubenschild
